COURSE

CSE 325 · BYU-Idaho

BRANCH

marco/frontend-design

What is Notespack?

Notespack helps students discover, share, and attend events around campus. Browse what's happening, filter by what you care about, and create your own events to invite friends. Built as a group project for CSE 325.

WHO

Campus students

WHAT

Events platform

MY PART

Entire frontend homepage

What I shipped

9

HOMEPAGE SECTIONS

Hero · Marquee · Categories · Why · Stats · Featured ·
Testimonials · How · CTA

6

FILES CHANGED

Index.cshtml · _Layout.cshtml · Privacy · site.css · site.js ·
NPlogo.png

0

BACKEND FILES TOUCHED

Rosana's models and controllers are untouched. Pure
frontend.

Nine sections, top to bottom

01

Hero

Animated split text, gradient rule, dual call-to-action buttons

02

Event marquee

Glowing horizontal scroll of event names

03

Categories ribbon

Pills with active state, ready for filter wiring

04

Why Notespak

Three glass cards with 3D tilt and cursor glow

05

Stat counters

Numbers animate from zero when scrolled into view

06

Featured events

Six cards with gradient covers and date badges

07

Testimonials

Student quotes with avatar gradient circles

08

How it works

Three numbered steps from sign-in to attend

09

CTA strip

Secondary conversion path before the footer

PLUS

- Circular chrome NP navbar logo
- Skip-to-content link for keyboard users
- Multi-column footer (Brand · Product · For Students · Company)

The little touches, in plain words

Just vanilla JavaScript plus a tiny GSAP cameo for the hero entrance. No heavy libraries.

3D card tilt

Cards lean toward your mouse as you move across them. Subtle, not loud.

Cursor glow

Each card has a soft cyan light inside that follows your cursor.

Cursor halo

A faint cyan dot trails your mouse everywhere on the page.

Smooth fade-ins

Sections gently fade up as you scroll down. No sudden jumps.

Counting numbers

The stat numbers count from zero to their target when you scroll past.

Active pill

Clicked category pills fill with cyan to show what's selected.

a11y means accessibility.

The 11 stands for the eleven letters between 'a' and 'y'.

Blind users

Navigate using screen readers

Keyboard only

Tab key, arrow keys, no mouse

Low vision

Need high contrast and big text

Color blind

Cannot rely on color alone

Our homepage works for all of them.

WCAG 2.1 AA

Web Content Accessibility Guidelines, version 2.1, level AA.

WHAT IT IS

The global rulebook for web accessibility. Three levels: A (minimum), AA (industry standard), AAA (strictest). AA is what BYU, government sites, and most companies require.

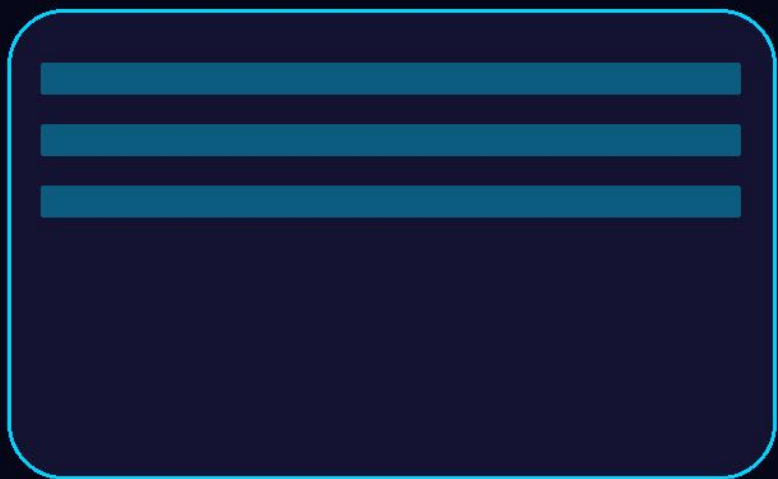

WHAT WE PASS

- ✓ Text contrast 4.5 to 1
- ✓ Keyboard navigation works
- ✓ Focus rings visible
- ✓ Reduced motion respected

The homepage passes.

Works on every screen size

Four breakpoints. The layout adapts so the page never feels cramped or stretched.

Desktop

≥ 900px

Full 4-column footer, full nav

Tablet

720-900px

Two-column footer

Mobile

480-720px

Stacked layout, condensed
nav

Phone

< 480px

Logo only, wordmark hidden

What was asked, what I shipped

DONE · 4

- ✓ Browse events (Featured Events grid)
- ✓ See categories (ribbon)
- ✓ Mobile responsive
- ✓ Modern UI

UI READY · 1

- Filter by category. Pills wired to click, waiting on the filter endpoint.

PENDING · 5

- Sign in / Register
- Create event
- Edit / Delete event
- Share event with code
- Search

The six files I changed

Pure frontend. Rosana's backend scaffold is untouched.

Views/Home/Index.cshtml

9 homepage sections, all the magic happens here

Views/Shared/_Layout.cshtml

Circular navbar logo, 4-column footer

Views/Home/Privacy.cshtml

Themed privacy page to match

wwwroot/css/site.css

Full design system, breakpoints, motion

wwwroot/js/site.js

Reveals, counters, cursor glow, 3D tilt

wwwroot/img/NPlogo.png

Chrome NP brand asset

Backend untouched · Zero database changes

What comes next

Eight follow-up pull requests the team will tackle next.

01

Login + Register views

Marco and Rebeca, themed forms wired to Melissa's auth backend

02

Events browse page

Full list with the search and filter UI already drafted

03

Event details page

Single event view with the share modal trigger

04

Create event form

Posted to Joseph's `EventsController.Create` endpoint

05

Edit event form

Owners only, validated on the backend

06

Delete confirmation

Confirm modal with backend cascade handled

07

My events dashboard

Authorized view, lists what the user created or saved

08

Share modal

Access code copy-to-clipboard built on Melissa's share logic

Frontend is ready.

Backend, take it from here.

Pull the branch. Run it locally. Drop comments on the PR. Questions go to Marco.
